Re: Margaret L. Chen · **DOB:** 1967-08-14 · **Sex:** Female

Dear Colleague,

Reason for Referral: Mixed dyslipidemia with elevated LDL-C and reduced HDL-C on routine lipid panel; please co-manage lipid-lowering therapy and assess 10-year ASCVD risk.

History of Present Illness: Ms. Chen is a 58-year-old woman seen in our office for cardiovascular risk assessment following her primary-care lipid panel of 2026-04-12 (LDL-C 161 mg/dL, HDL-C 38 mg/dL, triglycerides 198 mg/dL, total cholesterol 232 mg/dL). She is asymptomatic, with no chest pain, dyspnea on exertion, palpitations, or syncope. Family history is notable for a paternal MI at age 62. She walks 30 minutes most days and follows a Mediterranean-style diet. Current BP in clinic 132/84.

Past Medical History:

- Type 2 diabetes mellitus without complications (E11.9)
- Essential hypertension (I10)
- Mixed hyperlipidemia (E78.2)

Current Medications:

- Metformin 500 mg PO BID
- Lisinopril 10 mg PO daily
- Aspirin 81 mg PO daily

Allergies: Penicillin (rash, moderate)

Specific Question / Requested Action: Initiate moderate-intensity statin therapy and follow-up lipid panel in 12 weeks. Please reach out with any questions regarding shared management.

Sincerely,

Helen Park, MD

Cardiology
